# CRISTAL VIEW FUTURE IMPROVEMENTS

- Virtual Try-On Experience: Introduce an interactive virtual try-on feature, allowing customers to upload their photo or use a webcam to see how glasses look on their face. This enhances confidence in their purchase decision.
- Tailored Style Recommendations: Implement a personalized style quiz that suggests glasses based on individual preferences, face shape, and lifestyle, offering a more customized shopping experience.
- Augmented Reality Integration: Incorporate AR technology for a more immersive experience, enabling customers to virtually place glasses on their faces through their mobile devices, ensuring a precise fit and style preview.
- Community Engagement Hub: Create a dedicated space on the website for customer stories, reviews, and user-generated content, fostering a sense of community and trust among potential buyers.
- Accessible and Inclusive Design: Ensure the website is fully accessible, considering features like text-to-speech options and high-contrast interfaces for users with disabilities. Additionally, expand language options for a more inclusive global audience.
- Responsive Live Support: Implement live chat support with knowledgeable representatives to assist customers instantly, providing guidance and answering queries promptly during their shopping journey.
- Seamless Social Integration: Integrate social media more prominently, allowing users to share their favorite styles directly from the website and enabling easy access to user-generated content from social platforms.
